

"Manitoba Hydro arranged to have Cascade Energy Engineering provide a training seminar on industrial ammonia refrigeration systems as part of their commitment to assist their customers in savings energy. The seminar was very well received from all participants who included engineering consultants, refrigeration contractors, plant engineers and system operators. The seminar provided many practical energy savings measures with some requiring no capital investment. Some of the companies have implemented some of the suggestions and have realized substantial energy savings. The presenter spoke at a level that everyone could understand and provided real life examples. I would definitely recommend this seminar to anyone who operates, or is responsible for, an industrial ammonia refrigeration system."

-- Craig Perrett, Manitoba Hydro
